PROJECT OVERVIEW

This project is a movie streaming web application built using Angular. It provides users with an intuitive interface to browse, search, and watch movie details seamlessly. The app integrates with TMDb API to fetch real-time movie data, including trending films, genres, and detailed descriptions.

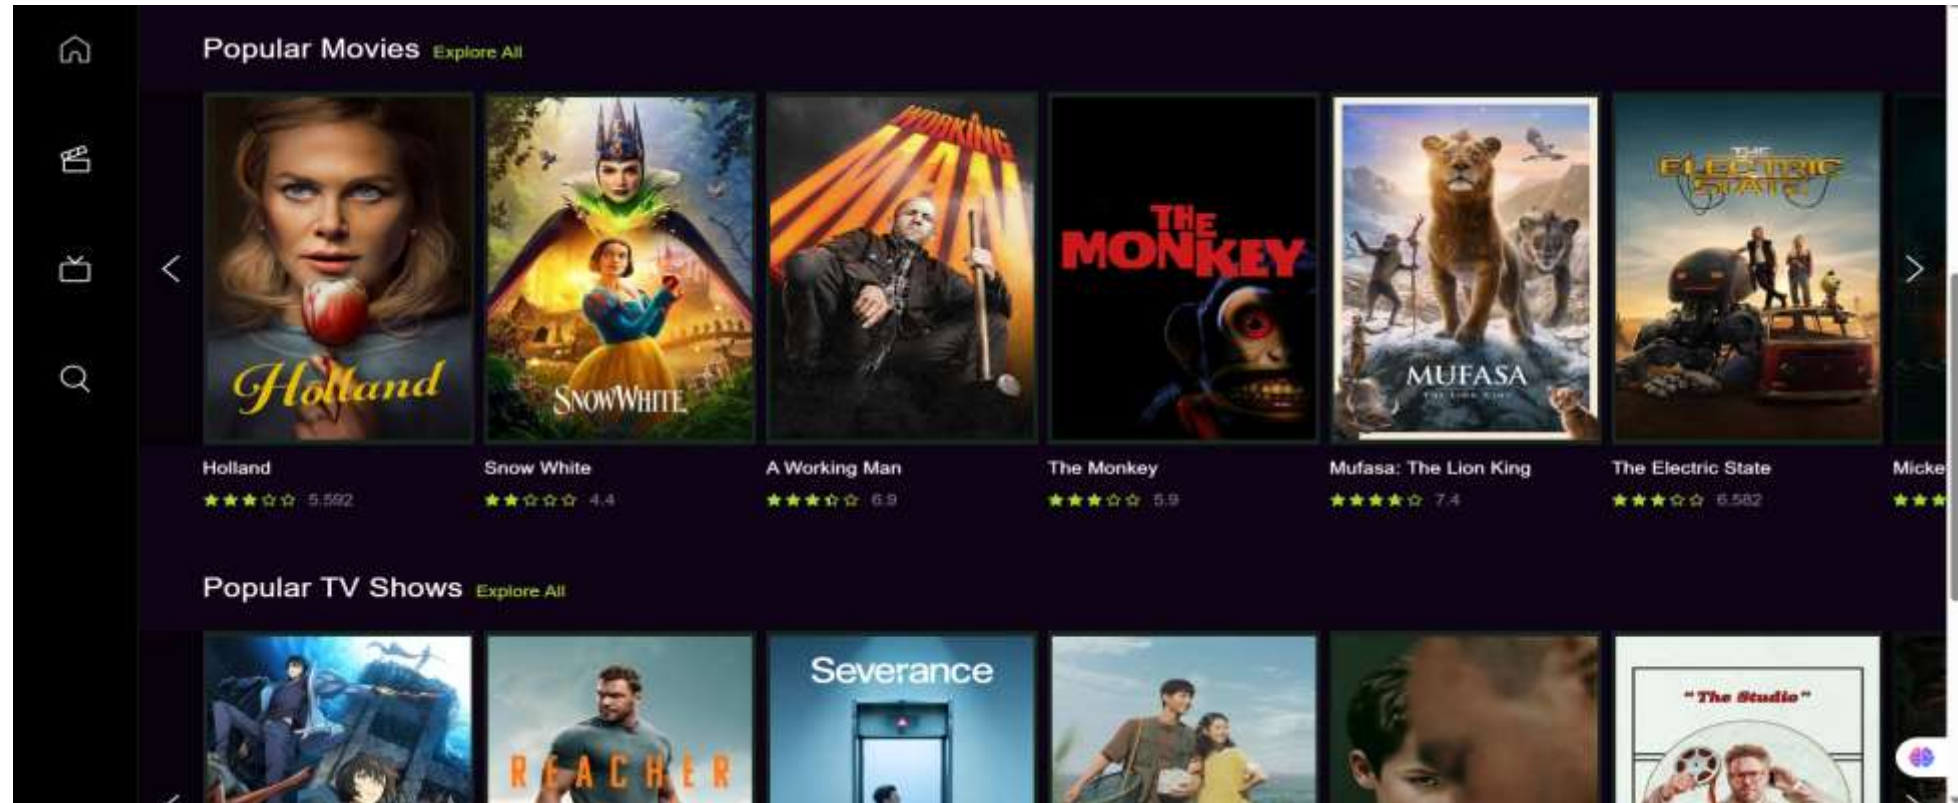

It includes features like dynamic movie listings, a search bar, and a responsive UI to enhance the viewing experience. The project showcases modern frontend development practices, including Angular components, routing, and API handling, making it a great addition to a developer's portfolio.

HOME PAGE

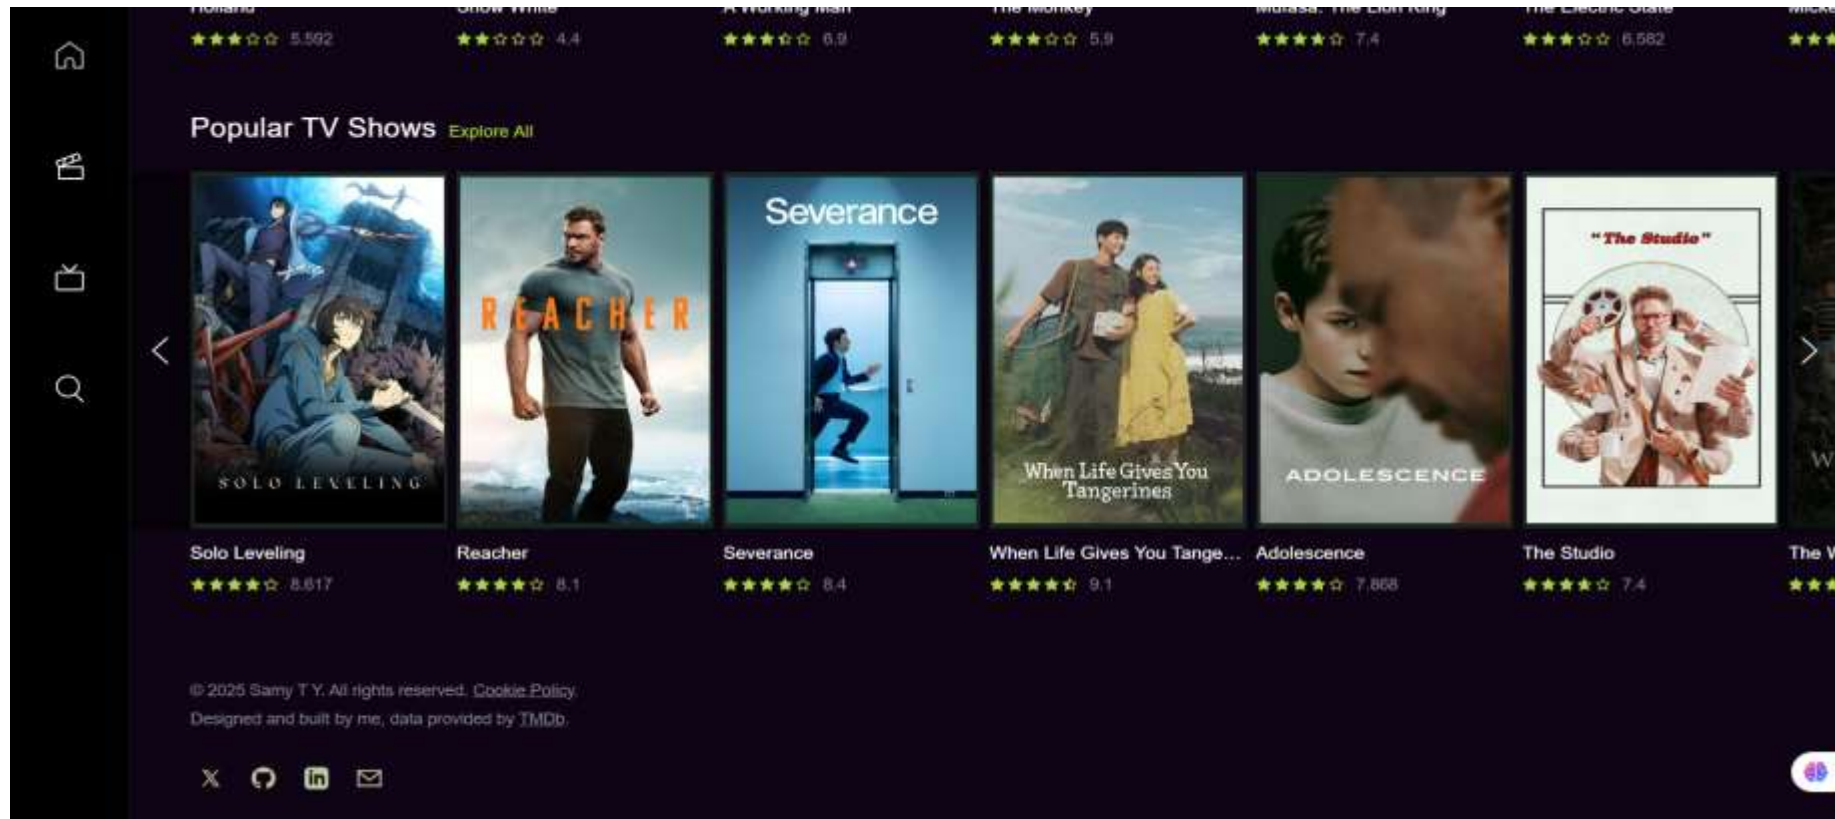

The home pages consists of the carousal which consists of the popular and highly rated movies that are currently running successfully on the platform , in which the trailer of the movie can also be watched for the user's convinience

MOVIES PAGE

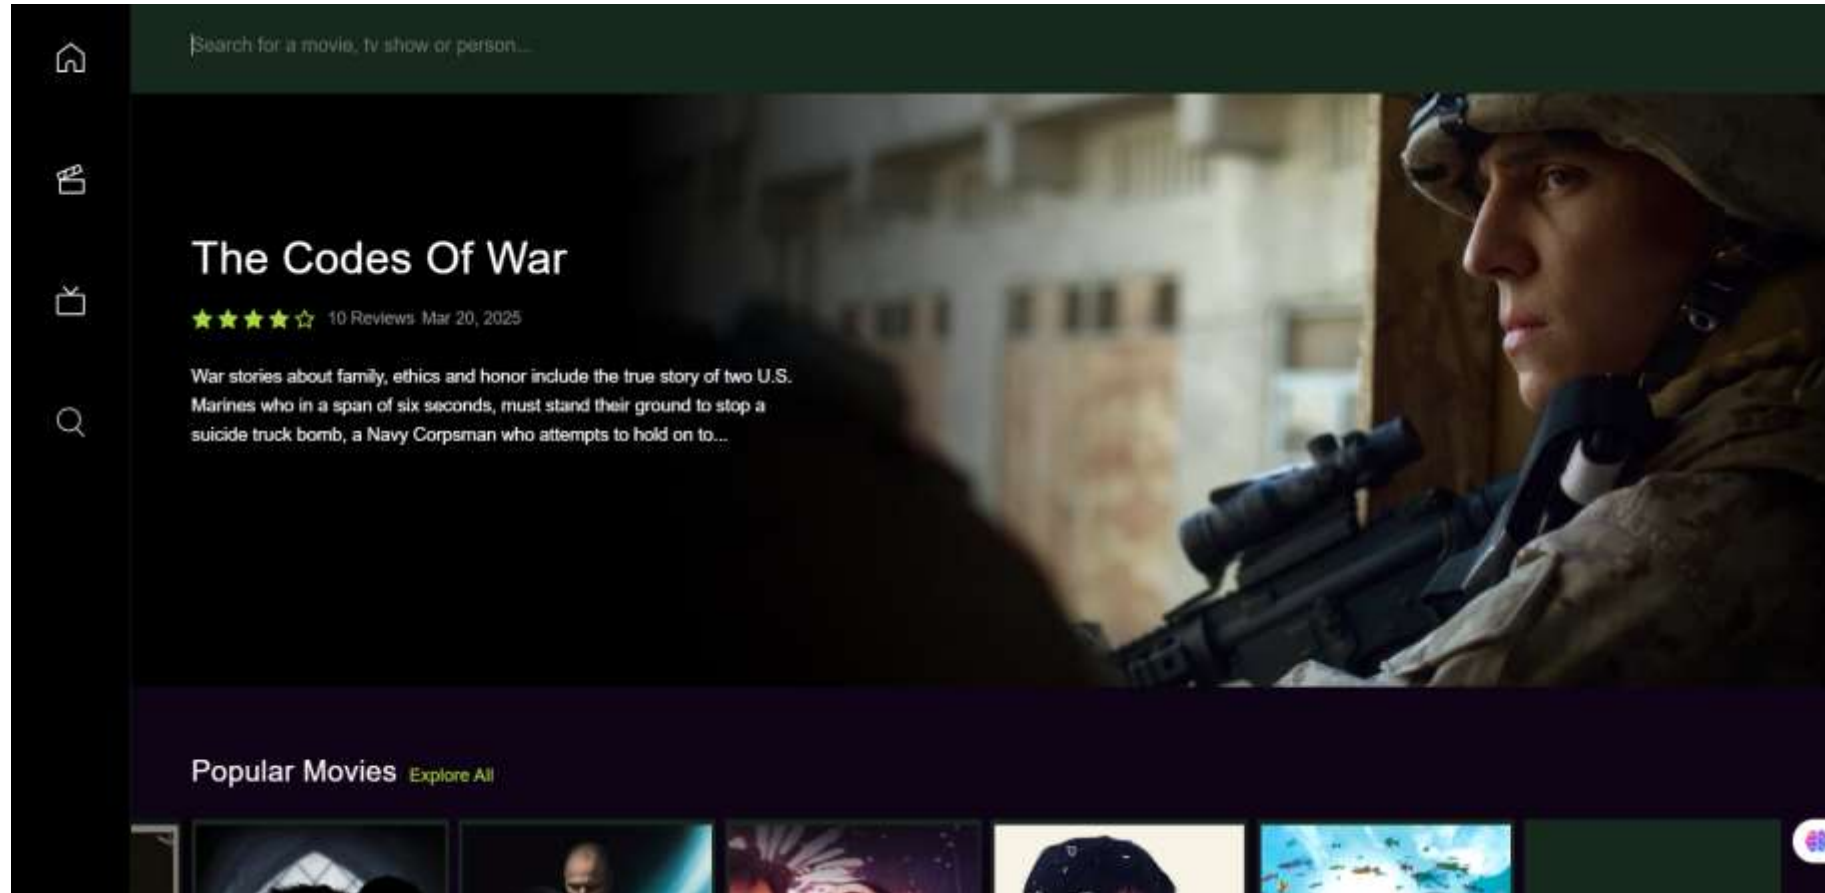

In the second we have the movies section which consists of all the movies released in all timelines ,with the ratings, cast and plot of the movies which will be a good source for all the movie watchers

TV SHOWS PAGE

In third , we have the Tv Shows page in which we have all the popular Tv shows in the top continued by the Tv shows of different languages with the cast, ratings and plot of the show

THE SEARCH BAR

In the last , we have the search bar in which we can search for the content we are looking for like movies , tv shows . It is helpful in saving time in searching the required movie or Tv show. Once we typed the required movie or Tv show in the search bar it will directly give the movie or Tv show.

Sample of Search Bar
